STORY ID	ITEM	USERSTORY	TASKS	STATUS
1	Timeline and Nodes	As an admin, I need to be able to add, delete and reorder nodes so I can manage the timeline.	Implement linked list data structure to represent timeline where Nodes are events.	Not Started
			Create add and delete functions. Nodes should be addable and deletable from any position in timeline.	Not Started
			Create function for reorder interaction, let admin choose a node and choose its new position, shifting existing nodes towards the end.	Not Started
2	Node Data	As an admin, I need to be able to add and edit information contained in each node so I can manage each virtual exhibits.	Implement variables within each Node for storing node information. Title, Date, Summary, Facts.	Not Started
			Create data entry functions for adding, overwriting and deleting information stored in nodes.	Not Started
4	Node Media	As an admin, I need to be able to add and edit user accessible media within each node so I can manage what is displayed to users.	Implement file management which handles all viewable media for each node.	Not Started
			Create functions to add and remove media files from nodes.	Not Started
6	Nodes	As a user, I should be able to select a node in the timeline and be able to access the information and media within it.	Implement the system for interacting and traversing the timeline by travelling through nodes.	Not Started
			Create input functions for previous, next, and receiving a list of all nodes.	Not Started
			Add function for selecting current node to view its contents.	Not Started
11	Digital Tour	As a user, I should have an option to be toured through the timeline and guided through nodes.	Implement a system which automatically moves through the timeline for the user and displays information and media in order.	Not Started
